**DETAILED ACTION**

**Election/Restrictions**

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-11, 13 and 15-19, drawn to an isolated polynucleotide encoding a polypeptide or variant thereof; recombinant construct, plant, seed and method of altering root structure comprising said polynucleotide.

**If Applicants elect Group I, Applicants are to elect one DNA sequence from claim 9 and a corresponding amino acid sequence from claim 1, and at least two motifs from claim 10, wherein the motifs are a part of the elected amino acid sequence.**

Group II, claim 12, drawn to an isolated promoter.

**If Applicants elect Group II, Applicants are to elect one nucleic acid sequence from claim 12.**

Group III, claim 14, drawn to a recombinant construct comprising an isolated polynucleotide operably linked to a promoter.

**If Applicants elect Group III, Applicants are to elect one amino acid sequence from claim 1 and a promoter sequence from claim 12.**

Group IV, claim 20, drawn to a method to isolate nucleic acid fragments.

Group V, claims 21-22, drawn to a method of mapping genetic variation or a method of molecular breeding to alter root structure.

2. Pursuant to 37 CFR 1.475(d), the ISA/US considers that where multiple products and processes are claimed, the main invention shall consist of the first invention of the category first mentioned in the claims and the first recited invention of each of the other categories related thereto. Accordingly, the main invention (Group I) comprises the first recited product, an isolated polynucleotide encoding a polypeptide; plant and method comprising said polynucleotide. Further pursuant to 37 CFR 1.475(d), the ISA/US considers that any feature which the subsequently recited products and methods share with the main invention does not constitute a special technical feature within the meaning of PCT Rule 13.2 and that each of such products and methods accordingly defines a separate invention.

3. In addition, the claims are not linked by a single technical feature because they are each drawn to products and processes not shared by the other. The polynucleotide of Group I is not shared by the promoter of Group II which is not shared by the recombinant construct comprising a functional fragment of Group III which is not shared by the methods of Groups IV and V.

4. Each of Inventions I-V are capable of being separately made, independently used and the patentability of one does not render the others obvious or unpatentable.

Art Unit: 1638

5. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by the literature and sequence searches required for each of the Inventions are not required for another of the Inventions, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
